Any information regarding disposable income would also be appreciated. Thanks very much.								

Here's what we like to see:

The percentages per table should add up to 100% (denominator = corresponding aggregate collateral pool balance)

For example, if the collateral matices are for group II collateral, denominator to be used for all the % should be as of aggregate group II collateral balance)

Here's what we like to see:

The percentages per table should add up to 100% (denominator = corresponding aggregate collateral pool balance)

For example, if the collateral matices are for group II collateral, denominator to be used for all the % should be as of aggregate group II collateral balance)

Here's what we like to see:

The percentages per table should add up to 100% (denominator = corresponding aggregate collateral pool balance)

For example, if the collateral matices are for group II collateral, denominator to be used for all the % should be as of aggregate group II collateral balance)
