* A virtual control circuit (“VCC”) is between the Mahwah data center and a single end point, including a Trading Floor, while a virtual routing and forwarding service (“VRF”) can be between the Mahwah data center and one or more Trading Floors. If the User chooses VCCs or a combination of a VCC and a VRF for connectivity to several Trading Floors, it will be charged separately for each connection, provided that two VCCs from the Mahwah data center to the same Trading Floor will be subject to one VCC charge so long as only one VCC is able to be active at a given time. If the User chooses one VRF for connectivity to multiple trading floors, the User will be charged for one connection.
